

Scitec provides over 40 models of single and 2-line analog telephones for literally all vertical markets from small / large businesses to state and federal government facilities including hospitals, schools, and the hospitality industry.

Scitec manufactures standard 2500 sets with a 5-year warranty to our unique feature phones with patented features and one-of-a-kind products. Our 5S-c is a single-line line-powered CID that works during a power outage and has all 3 message waiting light applications ( 90V Neon, LED, & Centrex FSK). This allows the telephone to work out-of-the-box on any analog system and Centrex for the message waiting light.

### Core Business

Scitec provides innovative telecom solutions for the following core application groups...

- \* Hospitality: Popular Aegis Series telephones and smart Scitec 600 Series phones have an established reputation among hoteliers for feature-rich performance, quality, and value in the marketplace.
- \* Business/Education: On campus, at government offices, military bases, and leading corporations, Scitec business telephones deliver feature-rich performance at up to 50% below comparable digital sets.
- \* Healthcare: From the lobby, emergency room, OR, and patient rooms, to administrative offices, Scitec healthcare telephones provide important communications services to hospital staff, families, and patients alike.
- Consumer: At home, in any decor, Scitec residential phone sets deliver the day-to-day performance busy families, home office, and small businesses expect.

### Product Innovation

- \* Smart technology: Smart Scitec 600 Series telephones employ microprocessor telecom technology to automate hotel guestroom voice mail retrieval, data port connectivity, line selection, and PBX message light compatibility.
- \* Telephone line power technology: Scitec 5S-c line-powered Caller ID telephones require no AC adaptor or batteries, operate during power outages, and migrate to IP switch analog port Caller ID applications.

\* Headset-ready telephones: HDST-12 telephones with pre-amplified 2.5 mm headset jack and ON/OFF headset key, are designed to meet the needs of busy call centers and businesses worldwide.

- Single-Use telephones: One-piece H2001 single-use telephones help hospitals reduce cross-contamination risks, and save telephone cleaning and repair costs.

We distribute our telephones through all of the major distributors around the world including the Graybar and Anixter Corporations. Our quality standards are unmatched in the telecommunications industry and our warranty programs range from 90 days on our single-use healthcare bedrail phones to 5-year warranties on most of our models.

Our web page is [www.scitecinc.com](http://www.scitecinc.com) and we have 2 locations on the United States. Our corporate office is in Urbana, IL and our west coast division is in Newport Beach, CA.
